About BookVault

BookVault is a full-stack web application designed for efficient book management. It integrates React frontend, Spring Boot backend, JWT authentication, and database connectivity into a seamless platform.

Whether you are an administrator managing collections or a user exploring available books, BookVault provides a smooth and secure experience.

Why Choose BookVault?

Secure Authentication

JWT-based authentication ensures secure access and protected book management operations.

Easy Book Management

Add, update, delete, and search books with a clean and user-friendly interface.

Fast REST APIs

Built using Spring Boot REST APIs for fast and scalable performance.
